Retainer Housing Reducer

Our Retainer Housing Reducer is a press-in reducer for use on our spring changers. It allows you to use our adjustable valve spring removers on smaller diameter springs (such as Beehive™-style or Ford Modular engine springs).

Could be used on the following spring changers:

- POW351054
- POW351058
- POW351059
- POW351061
- POW351052

Spring Seat Cutters

Most high performance engines require larger-than-stock diameter valve springs. Our Spring Seat Cutters allow you to machine the spring seats using an ordinary hand drill. We even offer seat cutters to accommodate the spring seat cups that are so widely used today. All seat cutters cut to .630" inside diameter.

**Note: These Spring Seat Cutters utilize our interchangeable arbors, which are sold separately, so order the one that matches your valve stem diameter.*

Valve Guide Cutter

Powerhouse® Valve Guide Cutters are designed to shorten the valve guide boss for high lift cams and also reduce the outside diameter to accept triple springs and/or aftermarket valve seals.

**Note: These Valve Guide Cutters utilize our interchangeable arbors, which are sold separately, so order the one that matches your valve stem diameter.*
